INTERNATIONAL A-LEVEL PSYCHOLOGY

Unit 3 Advanced Topics and Research Methods 2

Friday 7 June 2024

07:00 GMT

Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:

- a calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- All working must be shown.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 90.

Section A: Psychology of Sleep

Answer **all** questions in the spaces provided.

Kazem is a nurse who regularly works shifts.

When Kazem arrives home at 9 am after his night shift he often struggles to fall asleep, despite feeling tired. Last night, at 2 am during his shift, he nearly switched off an important piece of medical equipment until a colleague stopped him. Recently, Kazem has been feeling ill and his doctor has sent him for medical tests.

0	1
---	---

Using your knowledge on the effects of shift work, explain Kazem's behaviour.

[4 marks]

Our biological rhythms are influenced by endogenous pacemakers and exogenous zeitgebers.

0	2	.	1
---	---	---	---

Using an example, what is meant by endogenous pacemakers?

[2 marks]

0 2 . 2

Using an example, what is meant by exogenous zeitgebers?

[2 marks]

0 3

Describe memory consolidation as a function of sleep.

Section B: SchizophreniaAnswer **all** questions in the spaces provided.**0 6**

Using an example, explain the term dysfunctional thought processing.

[2 marks]

Asha is talking to her doctor.

“Recently, I have been struggling to find the motivation to leave the house to go to work. When I do go outside, I think that people from the government are recording my behaviour. At times, I also hear voices which comment on my actions.”

0 7 . 1Outline **two** symptoms of schizophrenia shown by Asha.**[2 marks]**

Asha’s doctor asks her to provide some information about her family’s medical history.

Asha says, “My father was diagnosed with schizophrenia 3 years ago. I also think that my grandmother, my father’s biological mother, had some symptoms of schizophrenia as she used to say that she heard voices. However, my grandmother was never medically diagnosed with the condition.”

0 7 . 2

Using your knowledge of genetics as an explanation for schizophrenia, briefly explain why Asha might have developed schizophrenia.

[2 marks]

0 8

Briefly evaluate the genetic explanation for schizophrenia.

Section C: Research Methods 2

Answer **all** questions in the spaces provided.

A psychologist wanted to investigate how new experiences affect a person's level of excitement. The psychologist was not aware of any previous research in this area.

The psychologist attended a major sporting event and asked people waiting inside the stadium if they would take part in a study. Each person who agreed was asked if they had attended a live sporting event before or not. They were then asked to rate their current level of excitement on a scale of 1–10, where 1 means 'not excited at all' and 10 means 'very excited'.

1	0
---	---

State the aim of this study.

[1 mark]

1	1
---	---

Name the experimental method the psychologist is using in this study.

[1 mark]

1	2
---	---

Identify whether the psychologist should use a directional hypothesis or a non-directional hypothesis for this study. Explain your answer.

[2 marks]

1 3

Write an appropriate hypothesis for this study.

[3 marks]

The results of this study can be seen in **Table 1** below.**Table 1** Median excitement rating for those who had and had not attended a live sporting event before and the ranges for both groups

	Group 1 (had attended a live sporting event)	Group 2 (had not attended a live sporting event)
Median excitement rating	3.5	8
Range	6	2

1 4Explain what the median and range values in **Table 1** suggest about the effect of new experiences on excitement levels. Justify your answers.**[4 marks]**

Median _____

Range _____

Turn over ►

1 5

Identify the experimental design used by the psychologist in this study. Explain your answer.

[2 marks]

1 6

The psychologist wanted to analyse the results of the study using a statistical test. Briefly explain the purpose of statistical testing.

[3 marks]

*Do not write
outside the
box*

1	7
---	---

Name an appropriate statistical test that the psychologist could use to analyse the data in this study. Explain **three** reasons for your choice in the context of this study.

[7 marks]

[illegible]

Extra space

Only **one** answer per question is allowed.

For each multiple-choice question completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

1 8

At the end of the study the psychologist produced a scientific report.

Identify the correct order of the sections of a scientific report.
Shade **one** box.

[1 mark]

A Abstract, discussion, introduction, results, method and referencing

☐

B Abstract, introduction, method, results, discussion and referencing

☐

C Abstract, method, introduction, results, discussion and referencing

☐

D Abstract, results, discussion, introduction, method and referencing

☐

The psychologist decided to conduct a follow-up study to investigate if there is a correlation between excitement ratings and the number of times a person has attended a live sporting event.

The psychologist attended another major sporting event and asked 10 people how many sporting events they had been to in the past 6 months.

They were then asked to rate their current excitement level on a scale of 1–10, where 1 means 'not excited at all' and 10 means 'very excited'.

1	9
---	---

Identify the co-variables in this follow-up study.

[2 marks]

2	0
---	---

Explain **one** strength and **one** limitation of correlations in psychological research.

[4 marks]
