INTERNATIONAL AS PSYCHOLOGY

Unit 2 Biopsychology, Development and Research Methods 1

Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:

- a calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- All working must be shown.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 90.

For Examiner's Use	
Section	Mark

Section B: Cognitive Development

Answer **all** questions in the spaces provided.

Do not write
outside the
box

Only **one** answer per question is allowed.

For each question completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

0 7

In which of Piaget's stages of intellectual development is a child **most** likely to demonstrate the ability to perform mental operations such as conservation?

Shade **one** box only.

[1 mark]

A Concrete operational stage

☐

B Formal operational stage

☐

C Pre-operational stage

☐

D Sensorimotor stage

☐

0 8

According to Piaget's stages of intellectual development, which age group is associated with the pre-operational stage?

Shade **one** box only.

[1 mark]

A 0–2 years

☐

B 3–6 years

☐

C 7–11 years

☐

D 12+ years

☐

Kemal is a 4-year-old boy who takes part in an experiment. The researcher puts a model of three mountains on a table in front of Kemal. A doll is placed on a chair opposite Kemal. The researcher shows Kemal a selection of pictures with different views of the mountains. Kemal's task is to choose the picture that he thinks is the same view as the doll's view of the mountains.

Using your knowledge of Piaget's theory of cognitive development, explain the choice of picture you think Kemal is likely to make and why he is likely to make that choice.

[illegible]

Baillargeon investigated violation of expectation in young children. Outline the procedure from **one** violation of expectation study.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

Section C: Research Methods 1

Answer **all** questions in the spaces provided.

*Do not write
outside the
box*

A psychologist wanted to see if spending time doing outdoor activities is related to happiness. He constructed a questionnaire about this which contained 10 questions. The psychologist decided to carry out a pilot study of his questionnaire using a sample of students from a local university.

1 3

What is a pilot study?

[2 marks]

1 4

Explain **one** possible reason why the psychologist decided to do a pilot study of his questionnaire.

[3 marks]

Turn over ►

1 5

Name **one** sampling technique and briefly explain how the psychologist could have used this technique in his pilot study.

[3 marks]

Sampling technique _____

Explanation _____

The questionnaire constructed by the psychologist collected qualitative data.

1 6

Write **one** question the psychologist could have used to collect qualitative data for this pilot study.

[2 marks]

After completing the questionnaire study using the final version of his questionnaire, the psychologist analysed the results. The data from this study suggested that people who spent more time outdoors reported more happiness.

The psychologist then conducted an experiment to investigate if the location where people exercise affects happiness. For this experiment he obtained a sample of 20 students from a different university.

The psychologist asked the students to exercise each day for five days. The students were randomly allocated to **either** Condition 1 **or** Condition 2.

Condition 1: walking for 60 minutes in a gym.

Condition 2: walking for 60 minutes in a park.

At the end of the fifth day, each student rated their happiness on a scale of 7 to 1, where 7 = extremely happy and 1 = extremely unhappy.

1	7
---	---

Name and briefly explain the experimental design used by the psychologist in this experiment.

[3 marks]

Experimental design _____

Explanation _____

1	8
---	---

Briefly explain how the independent variable in this experiment was operationalised.

[2 marks]

Turn over ►

1	9
---	---

Explain **one** possible problem with asking students to rate their happiness.

[2 marks]

2	0
---	---

Identify **one** possible extraneous variable in this experiment and explain why it should have been controlled.

[3 marks]

The ratings data collected in the experiment is in **Table 1**.

Table 1: Happiness ratings (score out of 7) of students in Condition 1 and Condition 2

Condition 1 (in a gym)	Condition 2 (in a park)
3	4
4	6
2	4
5	7
3	6
2	4
1	1
3	6
4	5
1	4

2 1 . 1

Calculate the range for the happiness ratings for **Condition 1**. Show your working.

[2 marks]

2 1 . 2

Explain why the range is an appropriate measure of dispersion for the happiness ratings for **Condition 1**.

[2 marks]

Turn over ►

2 1 . 3

Calculate the median for the happiness ratings for **Condition 2**. Show your working.**[2 marks]**

2 1 . 4

Explain why the median is an appropriate measure of central tendency for the happiness ratings for **Condition 2**.**[2 marks]**

The psychologist wanted to display the median happiness ratings for **Condition 1** and **Condition 2** on a graph.

2 2

Name an appropriate graph to display the medians for **Condition 1** and **Condition 2**. Briefly explain why the graph you have named is appropriate.

[2 marks]
